Digest

U.S. Agricultural Exports and Imports Top Year-Earlier Levels (see p. 2). Larger wheat and cotton shipments and higher corn and soybean prices raised U.S. agricultural exports to \$38 billion during fiscal year (FY) 1984 (October 1983–September 1984), up 10 percent from those of 1983. Volume remained near FY 1983's level of 145 million tons, with increases in wheat and cotton shipments offsetting reduced soybean product shipments.

U.S. Agricultural Imports Reach Record High (see p. 54). Increased demand and a strong dollar boosted U.S. agricultural imports in FY 1984 to a record \$18.9 billion, 16 percent above those of the same period in 1983. Imports increased in a wide range of commodities, including coffee, cocoa, tea, sugar, natural rubber, fruits, and vegetables.

Interest Rates Boost Dollar (see p. 78). U.S. dollar exchange rates on international markets showed almost unbroken monthly increases during FY 1984, reached an 11-year high against the German mark, and set records relative to the British pound, French franc, and Italian lira. Rising U.S. interest rates, a slowdown in inflation rates, and robust economic growth helped spur the dollar.

U.S. Agricultural Exports to EC Continue Falling (see p. 82). U.S. agricultural exports to the European Community (EC) in FY 1984 fell to \$6.7 billion from \$7.6 billion in 1983. These exports have fallen each year since 1980 when U.S. exports to the EC were valued at \$9.9 billion. Sluggish economic conditions, weak demand for livestock products, and larger grain crops have contributed to the steady downward trend in this important U.S. market.

U.S. Agricultural Exports and Imports

Top Year-Earlier Levels

Larger wheat and cotton shipments and higher corn and soybean prices raised U.S. agricultural exports 10 percent during fiscal year (FY) 1984 (October 1, 1983-September 30, 1984) to \$38 billion from \$34.8 billion in 1983. This increase is the first since export value peaked in 1981. Volume remained near FY 1983's level of 145 million tons, with increases in wheat and cotton shipments nearly offsetting large decreases in soybean product shipments. Coarse grain volume moved slightly higher in 1984, with large gains in sorghum and barley offsetting a slight decline in corn.

Average export prices exceeded those of 1984. Corn, sorghum, soybean, soybean oil, and cotton prices rose; only cotton remained significantly below its 1981 level, and vegetable oil prices moved well above that point. Wheat prices dropped, but volume was sufficient to raise wheat's export value.

Wheat, coarse grain, and soybean volumes are expected to increase in FY 1985, and cotton volume is expected to decline. Prices and the value of exports are expected to fall.

Soviet Purchases Raise Wheat Exports

U.S. wheat exports totaled 41.7 million tons in FY 1984, 14 percent over 1983's levels. Exports to Latin America rose and, combined with strong late-year shipments to the Soviet Union and increased exports to China, more than offset declines to India, the European Community (EC), and Eastern Europe. China imported 2.7 million tons more than it did in 1983, and shipments to the Soviet Union reached 7.5 million tons. Record stocks and a decline in the U.S. market share led wheat shipments to India to fall nearly 3 million tons. Wheat flour exports dropped nearly 53 percent in volume because 1983's subsidized sale to Egypt was not repeated, but volume moved 4 percent above that of FY 1982. The value of wheat and wheat product exports rose \$560 million, or 9 percent, over those of 1983.

World wheat supplies will increase for the fourth consecutive year in FY 1985, and the U.S. share of world wheat trade is expected to gain for the first time in 3 years. The EC is also expected to raise its market share substantially, and record exports are projected for Australia. Soviet import needs in 1985 are forecast at a record 23 million tons, and Pakistan and Iraq will have to supplement their drought-reduced crops with increased imports.

Feed Grain Exports Rise Slightly

U.S. feed grain exports rose in both value and volume in FY 1984. The U.S. share of world trade in feed grains rose to 61 percent, up from 59 percent in the previous 2 years. Corn export volume fell, but value increased 22 percent as a smaller 1983/84 crop pushed prices up. Corn exports to the Soviet Union more than doubled, making it our second largest market exceeded only by Japan. South Africa's third consecutive poor harvest led, in part, to \$1.3 billion in exports to Sub-Saharan Africa, a 61-percent increase. While South Africa is usually an exporter of feed grain, it imported \$400 million worth of U.S. corn in 1984. Exports decreased to Eastern Europe, Mexico, and China, which imported no U.S. feed grains in 1984.

Wheat feeding, stemming from record wheat supplies, led to decreased feed grain sales to Mexico and South Korea, two countries which bought substantial amounts of feed wheat from Australia.

The outlook for 1985 is mixed. Lower prices will offset a projected 7-million-ton increase in feed grain exports, so the U.S. world market share is expected to remain unchanged. Positive factors include Soviet import needs, which are forecast to be the second highest on record, and Canadian barley stocks at a 10-year low. On the other hand, EC wheat feeding, combined with a record high grain crop, will make the Community a net exporter of feed grains. Similarly, Mexican import needs will drop following a good corn harvest and large sorghum stocks. Record Chinese and Thai corn crops have already spurred competition in Asia.

Oilseeds Decline

A reduced U.S. oilseed crop and declining livestock feeding rates in Japan and the EC pushed down U.S. export volumes of oilseeds and products 21 percent in FY 1984, though value changed little. High vegetable oil prices steadied agricultural export values, allowing soybean oil value to nearly offset a \$394-million drop in beans and meal. U.S. soybean exports totaled 19.2 million tons in 1984, and soybean meal reached 4.9 million tons. Soybeans exported to the EC fell 37 percent, or nearly 4 million tons, but those to Japan dipped only 10 percent, and those to Asia fell 12 percent. The combined increase in shipments to the Soviet Union and Mexico offset an additional 600,000-ton decline to Spain.

U.S. soybean meal exports dropped 20 percent in volume and 17 percent in value in FY 1984, and the U.S. market share continued to slip. Exports fell primarily in the EC as shipments to the Netherlands were more than halved. Shipments to West Germany rose slightly, however, and shipments to Asia climbed 300,000 tons, primarily to the Philippines and Iraq.

U.S. soybean exports may rise to about 21.5 million tons in FY 1985, while South American exports are expected to decline to 3.8 million. Record grain and rapeseed harvests in the EC will limit import needs there, as will the Community's dairy reduction program, and world soybean trade is projected to increase only 4 percent. The U.S. world market share for soybean meal is expected to decrease again in 1985, and soybean oil exports will probably fall 10 percent as world palm oil supplies rebound.

Cotton Exports Jump Sharply

Cotton exports jumped 30 percent in volume and 42 percent in value in FY 1984 as textile trade rebounded. Exports gained significantly to the EC and Japan, to the Soviet Union and Yugoslavia (due to a poor crop in the Soviet Union), and to Pakistan, which bought 2 percent of all U.S. cotton exports, also due to a bad crop. Japan's imports rose 19 percent, while South Korea's dipped slightly, and China took virtually no U.S. cotton, reducing Asia's share of U.S. cotton exports to 70 percent from a 1976-83 average of 80 percent.

The recovery of foreign commodity production and an increase in world supplies are expected to push down U.S. cotton exports and their world market share in 1985. (Stephen MacDonald, World Analysis Branch)

U.S. Agricultural Imports Reach Record High

Increased demand and a strong dollar boosted U.S. farm product imports to a record \$18.9 billion in FY 1984 (October 1, 1983–September 30, 1984), compared with \$16.3 billion in 1983. The 16-percent increase reflected continued gains in consumer demand for items such as coffee, rubber, sugar, fruits, vegetable oils, pork, vegetables, tree nuts, tea, cut flowers, nursery stock, wine, malt beverages, and cocoa products. However, ample supplies depressed import demand for beef, tobacco, cocoa beans, and live cattle. The volume also reached a record high as principal farm product imports approached 15 million tons, up from 1983's 13 million tons, because of import increases in sugar, fruits, vegetables, bananas, coffee, rubber, vegetable oil, and pork.

Factors influencing increases in U.S. farm product imports in 1984 included winter freezes in Florida and Texas, a strong dollar on international markets, strong economic growth, and rapid price increases for coffee, rubber, fruit juices, vegetable oils, and cocoa products. U.S. monthly farm product imports averaged \$1.6 billion, compared with \$1.4 billion in 1983.

The developing countries, led by Brazil, Mexico, Indonesia, Colombia, the Philippines, Malaysia, the Ivory Coast, Ecuador, Guatemala, Argentina, Honduras, and El Salvador, provided nearly 60 percent of all U.S. farm product imports.

Noncompetitive Values Up

Noncompetitive imports, accounting for about 35 percent of all U.S. farm product imports, moved up 21 percent from those of FY 1983 to \$6.7 billion. Increased values for coffee, rubber, bananas, spices, tea, and cocoa products more than offset lower volume for cocoa beans.

Coffee, Cocoa Products, and Rubber Import Values Higher. Coffee imports in FY 1984, comprising 51 percent of all noncompetitive products, reached \$3.3 billion, 18 percent above 1983's total. Volume climbed 6 percent to 1.1 million tons, with the import unit price increasing from \$1.19 per pound in October 1983 to \$1.33 per pound in September 1984. Virtually all U.S. coffee imports are from countries belonging to the International Coffee Organization. The United States, however, had authority to import up to 66,000 tons from nonmember countries in 1984. Brazil is the single largest source of U.S. coffee, followed by Colombia, Mexico, the Ivory Coast, El Salvador, Indonesia, Guatemala, Ecuador, and Uganda.

Cocoa and products totaled \$1.1 billion in FY 1984, a 28-percent increase over those of 1983, due to larger imports of chocolate, cocoa butter, cake, and powder. However, because of lower cocoa bean imports, the volume dropped 3 percent to 451,000 tons as import unit prices jumped 32 percent to \$2,348 per ton. With U.S. stocks down and prices easing, U.S. cocoa bean imports are likely to be heavy early in FY 1985 and could exceed 1984's low level of 181,000 tons.

The New York cocoa futures price increased from an average 93 cents per pound in October 1983 to \$1.04 per pound in September 1984, mainly due to tighter world supplies, a slowdown in Nigeria's and Ghana's shipments, and a slight frost in Brazil. A potentially large world crop in FY 1985 will likely push down cocoa bean

prices. Brazil, the Ivory Coast, the Dominican Republic, the Netherlands, Canada, and Ecuador supplied most of the cocoa and product imports to the United States.

Strong growth in the industrial sector during FY 1984 resulted in a 47-percent increase in U.S. rubber imports, valued at \$854 million. Volume rose 24 percent to 809,000 tons, despite a 19-percent rise in import unit prices. Rubber imports are expected to rise again in 1985. Indonesia supplied about 60 percent of the rubber, and Malaysia shipped 24 percent.

Banana Imports Significantly Larger. U.S. banana imports during FY 1984 surged 14 percent ahead of 1983's levels to more than \$666 million, reflecting larger volume as well as higher import unit prices. Imports from Colombia increased 48 percent to 535,000 tons. Costa Rica replaced Honduras as the leading supplier of U.S. banana imports, with 635,000 tons in 1984, nearly 16 percent ahead of 1983's pace. Imports from Ecuador, the third largest supplier, also jumped sharply. However, imports from Honduras and Guatemala declined moderately because of hurricane damage in 1983. Among other noncompetitive imports, spices, tea, essential oils, and wool increased sharply.

Competitive Values Climb

Competitive imports totaled \$12.2 billion during FY 1984, up 13 percent above 1983's levels. Live hogs, pork, fruits, vegetable oils, wine, malt beverages, tree nuts, and cut flowers accounted for the bulk of the gain and more than offset declines for beef, live cattle, and tobacco.

Beef, Live Cattle, Tobacco Imports Fall; Pork and Live Hog Imports Rise.

U.S. beef imports dropped 16 percent to \$1.2 billion, as prices inched up. Ample supplies of red meat and rising broiler output lowered volume 17 percent to 550,000 tons. As beef output declines during the first half of FY 1985, imports should strengthen. Australia supplied about 42 percent of U.S. beef imports, and New Zealand shipped 22 percent. U.S. pork imports advanced 10 percent in FY 1984 to \$703 million because of smaller U.S. supplies. The volume of pork climbed nearly 31 percent, with unit prices falling 16 percent. Canada supplied about 45 percent of all pork imports, with Denmark, Poland, Yugoslavia, and Hungary the other principal suppliers.

Live cattle entries fell in FY 1984 to 822,000 head (\$295 million) from 1.1 million head (\$342 million) in FY 1983. About 358,000 head of Canadian feeders and stockers entered U.S. markets during 1984, compared with over 432,000 head during 1983. In contrast, live hog imports (all from Canada) totaled 1 million head in FY 1984, compared with 458,000 head in 1983. Relatively low prices and late summer strikes at Canadian meatpacking plants led to record shipments of hogs to U.S. processing plants.

A sharp drop in machine-threshed tobacco imports in FY 1984, mainly from South Korea, Brazil, and other Latin American countries, pushed down unmanufactured tobacco imports. Tobacco imports fell 21 percent to 190,000 tons valued at \$563 million. However, oriental leaf remained a large proportion of imports and increased 54 percent to 144,000 tons valued at \$488 million. Turkey and Greece were the major suppliers.

Oilseeds, Vegetables, and Fruits Gain. U.S. imports of oilseeds and products in FY 1984 jumped 52 percent to \$796 million, due mainly to gains in coconut and palm oils. Coconut oil, accounting for over 42 percent of all imported vegetable oil, surged 96 percent to \$337 million. Although the volume increased only 4 percent to

416,000 tons, import unit prices rose nearly 90 percent due to a decline in production. The Philippines supplied 87 percent of U.S. coconut oil imports, followed by Malaysia.

Imports of vegetables and preparations rose over 25 percent to \$1.3 billion in FY 1984, with canned tomato paste and sauce from Italy and Mexico and canned mushrooms from Taiwan and China gaining substantially. The volume of fresh vegetables from Mexico, such as tomatoes, cucumbers, onions, and peppers, increased sharply.

Fruit and preparation imports increased nearly 33 percent in FY 1984 to \$1.3 billion. Concentrated orange juice from Brazil accounted for the major gain. Total fruit juice imports increased 23 percent above 1983 levels to 27.3 million hectoliters, with value expanding 47 percent to \$671 million. Fresh grapes and melons accounted for most of the other import gains.

Sugar Imports Soar. U.S. sugar imports in FY 1984 totaled \$1.1 billion, up \$171 million from the 1983 level. Sugar import quantities reached 2.8 million tons in FY 1984, compared with 2.6 million tons in 1983. Increased values stemmed from larger quota exemptions and strong re-exports. The sugar quota for FY 1985 is set at 2.6 million tons (raw value), down 500,000 tons from the 1984 quota, and reflects the shift in domestic sugar use to high-fructose corn syrup (HFCS). U.S. sugar consumption in 1985 is projected to decline to 8.3 million tons (raw value), compared with 8.6 million in 1984. Import unit prices rebounded in FY 1984, averaging about \$405 per ton, compared with \$380 in 1983. Wholesale prices for sugar in the U.S. market averaged 22 cents per pound in October 1983, unchanged from September 1984. Import demand and use for HFCS jumped sharply in 1984. The Dominican Republic supplied most of the raw sugar, shipping 16 percent of U.S. import volume in FY 1984, followed by Brazil, the Philippines, Argentina, Australia, Guatemala, Peru, Honduras, Panama, and Colombia.

U.S. wine imports expanded nearly 9 percent to more than 5.2 million hectoliters in FY 1984. Import value advanced 14 percent to \$932 million because of rising prices for table wine. Malt beverage imports climbed 16 percent to \$578 million. Italy, France, and West Germany supplied most of the table wine imports, with the Netherlands, Canada, and West Germany providing the malt beverages.

Other competitive imports that gained in value in FY 1984 included dairy products, poultry products, tree nuts, feeds, cut flowers, nursery stock, grains, and molasses. (Charles E. Goode, World Analysis Branch)

Interest Rates Boost Dollar

The U.S. dollar appreciated strongly during fiscal year (FY) 1984 (October 1, 1983-September 30, 1984). U.S. currency increased in value during 10 of the 12 months, falling only in February and March. The dollar reached an 11-year high against the German mark, rising above 3 marks per dollar in September. U.S. currency set systematic record highs against weak currencies such as the British pound, French franc, and Italian lira. Of the world's major currencies, only the Japanese yen managed to remain within 5 percent of its October 1983 value.

The primary reason for the dollar's climb has been rising interest rates payable on dollar-denominated assets in Eurocurrency markets and the United States. During much of FY 1984, factors that led to even higher interest rates were clearly evident. As a result, there was little incentive to diversify dollar holdings into other assets.

Interest Rates Lead Dollar Advance

FY 1984 saw a steady rise in short- and long-term interest rates in the United States. Dollar-denominated assets offered higher rates of return than similar instruments issued in other currencies. Demand for dollars increased as investors clamored for U.S. stocks and bonds. An almost unbroken upward movement in interest rates further fueled such demand, resulting in an appreciating dollar through much of FY 1984.

The slowdown in inflation in the United States contributed greatly to the apparent earnings advantage for dollar assets. The rise in interest rates led to an increase in real returns. A comparatively stable price level also contributed to the notion that holding dollars was an excellent way to guarantee future purchasing power. This was made especially clear given the sharp drop in precious metal prices in 1980-81: gold was no longer considered the premier inflation hedge. Safety in U.S. investments, such as Government bonds, combined with moderating prices, made the dollar the clear choice of security-conscious investors.

Strong Economy Boosts Dollar

Rapid real growth in the U.S. economy acted in two important ways to add to the demand for dollars. First, sharp increases in income and profits added to the desire to invest in the United States, given the generally poorer or nonexistent prospects elsewhere. Second, the burgeoning economy was thought to be a strong factor in rising interest rates. Demand for credit to expand production and fill inventories puts upward pressure on the current and future cost of debt.

Expanding demand for financing by the business sector also coincided with unprecedented borrowing by the U.S. Treasury. The combination led many currency dealers and speculators to believe that interest rates would continue to rise. Dollars were purchased in anticipation of such increases during much of FY 1984. (David Stallings, World Analysis Branch)

U.S. Agricultural Exports to EC Continue Falling

The value of U.S. agricultural exports to the European Community (EC) has declined each year since 1980, the year when the value of the U.S. dollar was lowest against currencies of most EC countries. U.S. exports to the EC in fiscal year (FY) 1984 (October 1, 1983-September 30, 1984) totaled \$6.7 billion, down from \$7.6 billion in FY 1983 and from the record \$9.9 billion in 1980. The continued strength of the dollar made it difficult for U.S. products to compete in EC markets. In addition, sluggish economic recovery and continued high unemployment rates in Western Europe hurt the demand for agricultural products, particularly for livestock products and imported feed ingredients.

U.S. agricultural exports to the EC are not likely to improve in FY 1985 unless the value of the dollar weakens. Continued sluggish economic growth, weak demand for livestock products, and a record EC grain crop will depress EC imports. A further increase in agricultural self-sufficiency will mean stiffer competition among all exporters for the EC market in 1985. The forecast for lower export unit values resulting from lower world prices for most products further reinforces the dim outlook for any increase in the value of U.S. agricultural exports to the EC in 1985.

Most Farm Product Exports Fall

Lower volumes of most agricultural exports more than offset higher prices in FY 1984, resulting in the decreased value of most U.S. farm products exported to the EC.

The declines in most products continued downward trends begun in the early eighties. U.S. farm product exports to the EC declined 25 percent from \$8.9 billion in FY 1981 to \$6.7 billion in 1984. U.S. exports of meats and products, total grains and preparations, nuts, vegetables, soybeans, and protein meals dropped between 20 and 40 percent during the same period. The percentage drop in export value of some products was even larger, although some commodity categories actually increased. As a result, the composition of agricultural products exported to the EC shifted somewhat during the 5-year period.

Wheat (including the grain equivalent of flour) and total coarse grain shipments fell 61 and 56 percent, respectively, between 1981 and 1984, while fruits and preparations declined 50 percent. Meanwhile, U.S. cotton exports to the EC climbed 105 percent as European textile exports rose in response to modernization of its textile industry and reduced availability from other suppliers. Also, feeds and fodders (excluding oilcake) increased 16 percent in value. The small category of "other products" increased by 23 percent, supporting a modest shift away from U.S. exports of basic farm products toward more processed products.

Grain and Oilseed Exports Declining But Still Important

U.S. exports to the EC of grains and oilseeds and their byproducts totaled \$4.4 billion in FY 1984 and accounted for 66 percent of agricultural exports to the EC, down from \$6.5 billion in 1981. Nevertheless, these products continue to be quite important to the U.S. agricultural sector.

Feedstuffs accounted for most of the grain and oilseed shipments in FY 1984. Livestock feeding in the EC was a major market for U.S. corn, soybeans, soybean meal, and other nongrain feeds. The United States shipped approximately 15 percent of its corn exports to the EC in 1984, at \$600 million, and 33 percent of its soybean and soybean meal exports at \$2.8 billion. Factors affecting livestock feeding influenced EC imports of these commodities because all soybean meal and 75 percent of the corn used in the EC was fed to livestock. Imports from the United States accounted for about 80 percent of total soybean meal and 50 percent of all oilseed meal fed in the EC.

U.S. corn exports to the EC declined every consecutive year since they peaked in 1976 at nearly 16 million tons. A major factor was the EC's steadily increasing production of coarse grain and feed-quality wheat. Production expanded much faster than livestock production or the industrial use of grain. As a result, the EC shifted from a net importer of grain to a significant net exporter.

The EC used price policy to raise its market price of corn relative to wheat and barley prices to encourage greater feed use of EC-produced wheat and barley in place of imported corn. Another factor was the EC's 1984 decision to halt, at least temporarily, its policy to allow EC importers to fix advance import levy rates for corn. This decision caused uncertainty about future market prices for imported corn and resulted in a shift to French-produced corn for the starch industry.

Most nongrain feeds, unlike grain, enter the EC free of import levies and are, therefore, relatively inexpensive feedstuffs. Soybeans, soybean meal, and corn gluten are major U.S. exports in this category.

Slower growth in livestock production and a rapidly appreciating dollar, which increased soybean meal prices in Western Europe, began softening the demand for meal in 1980. In addition, rapeseed and sunflower seed production, which receives generous price supports in the EC, expanded 94 percent from 1980 to 1984 and displaced soybean meal on nearly a one-to-one basis. Finally, the availability of skimmed milk powder, which is subsidized for use as a high-protein feed in the EC, rose steadily during 1980-84. As a result of the rapid increase in EC milk production and depressed world markets, EC feed use of skimmed milk powder increased 48 percent (440,000 tons) in 1983 and continued to rise in 1984.

Feeds and fodders, excluding oilcake, have been the one bright spot in U.S. exports of feedstuffs. Exports rose 16 percent during 1981-84, in spite of the strengthening dollar. Corn byproducts, including corn gluten, accounted for 75 percent of U.S. feed and fodder exports in 1984. However, the EC wants to impose import restrictions on corn gluten feed. Regardless of the outcome of this issue now being negotiated under the General Agreement on Tariffs and Trade, the EC's demand for corn gluten, which is fed to dairy cows, will be constrained by the EC's new dairy policy, which has put quotas on milk deliveries.

U.S. wheat shipments to the EC fell 49 percent between 1981 and 1984 to 1.28 million metric tons. Although increased wheat production in the EC contributed to the decline, the U.S. share of the EC market dropped from 56 to 44 percent during the period, partially due to the strengthening of the dollar relative to the currencies of other suppliers.

Prospects for Exports Not Optimistic, Depend on Strength of Dollar

The value of U.S. exports to the EC will depend, in large part, on fluctuations in exchange rates. Although economic recovery in the EC will stimulate the demand

for agricultural products somewhat, livestock production will probably climb very modestly because the EC's consumption of meat, dairy products, and eggs is already very high. EC policy will probably not encourage increased livestock production because of the financial and political problems associated with surpluses. For example, the EC's milk delivery quotas are intended to control milk output for 5 years. Growth in the poultry industry, which uses about half of the corn fed, is expected to continue at a slower rate. All of these factors point to stagnant demand for imported feedstuffs.

Advances in technology and favorable fertilizer prices are expected to promote additional surplus grain production. This surplus will displace imported corn, and the demand for U.S. corn will likely continue to decline. Although growth in the starch industry will encourage use of more grains, increased starch output will be moderate. The EC may also begin to use larger quantities of wheat in the starch industry, and increased competition from French corn is expected. Significantly larger supplies of wheat gluten from starch manufacturing would dampen the demand for imported substitutes.

The rapid growth in the imports of soybeans and meal by the EC during the last 10-20 years is expected to slow considerably as the EC continues to dispose of surplus skimmed milk powder through livestock feeding and promotes expansion of protein feed production. A more fundamental limitation to long-term growth in soybean meal use is the lack of sustained strength in livestock production. Furthermore, in much of the EC, oilseed meal is being used near its maximum level in many feed rations.

The outlook for U.S. exports of many other agricultural products other than feedstuffs is also not optimistic. The EC's Common Agricultural Policy will likely continue to encourage steadily rising self-sufficiency in the agricultural sector and a decline in imports. EC enlargement to include Portugal and Spain, scheduled to take place in 1986, will introduce increased competition in the EC market for a variety of products. Given the pessimistic underlying supply and demand relationships, a weakening of the dollar offers the only optimistic opportunity for a significant rebound in U.S. agricultural exports to the EC. (Ron Trostle, Western Europe Branch).

Your Staff in Washington

Wouldn't it be nice to have a Washington staff to keep you up-to-date on all you need to know to steer your exporting business on the fast track to success?

Have the next best thing. Have **BUSINESS AMERICA**, our biweekly business magazine designed especially for firms like yours—American exporters who

want to grow, and American businesses ready to enter the lucrative world of exporting.

BUSINESS AMERICA is more than a magazine. It's virtually an exporter's service. We give you country-by-country marketing reports, incisive economic analysis, worldwide trade leads, advance notice of planned exhibitions of U.S. prod-

ucts worldwide, and success stories of firms like yours. We'll keep you posted on what's happening in government and on Capitol Hill that could affect your business and your profits.

A subscription to **BUSINESS AMERICA** will put our exporting experts at your fingertips—we give the phone numbers of our authors in every issue so you

can call with your specific questions, and get the answers you need to make savvy exporting decisions.

Put **BUSINESS AMERICA** to work for you. Use the order form below to start your subscription today.

More aggressive U.S. marketing and a re-direction of trade programs already in place would help to close the gap with the European Community in the world market for high-value agricultural products (HVP's).

The potential payoff in closing that gap is impressive: If by 1990 the U.S. expanded its HVP exports by half again as much as the present level, it would gain an additional \$50 billion in GNP and an additional 1 million U.S. jobs.

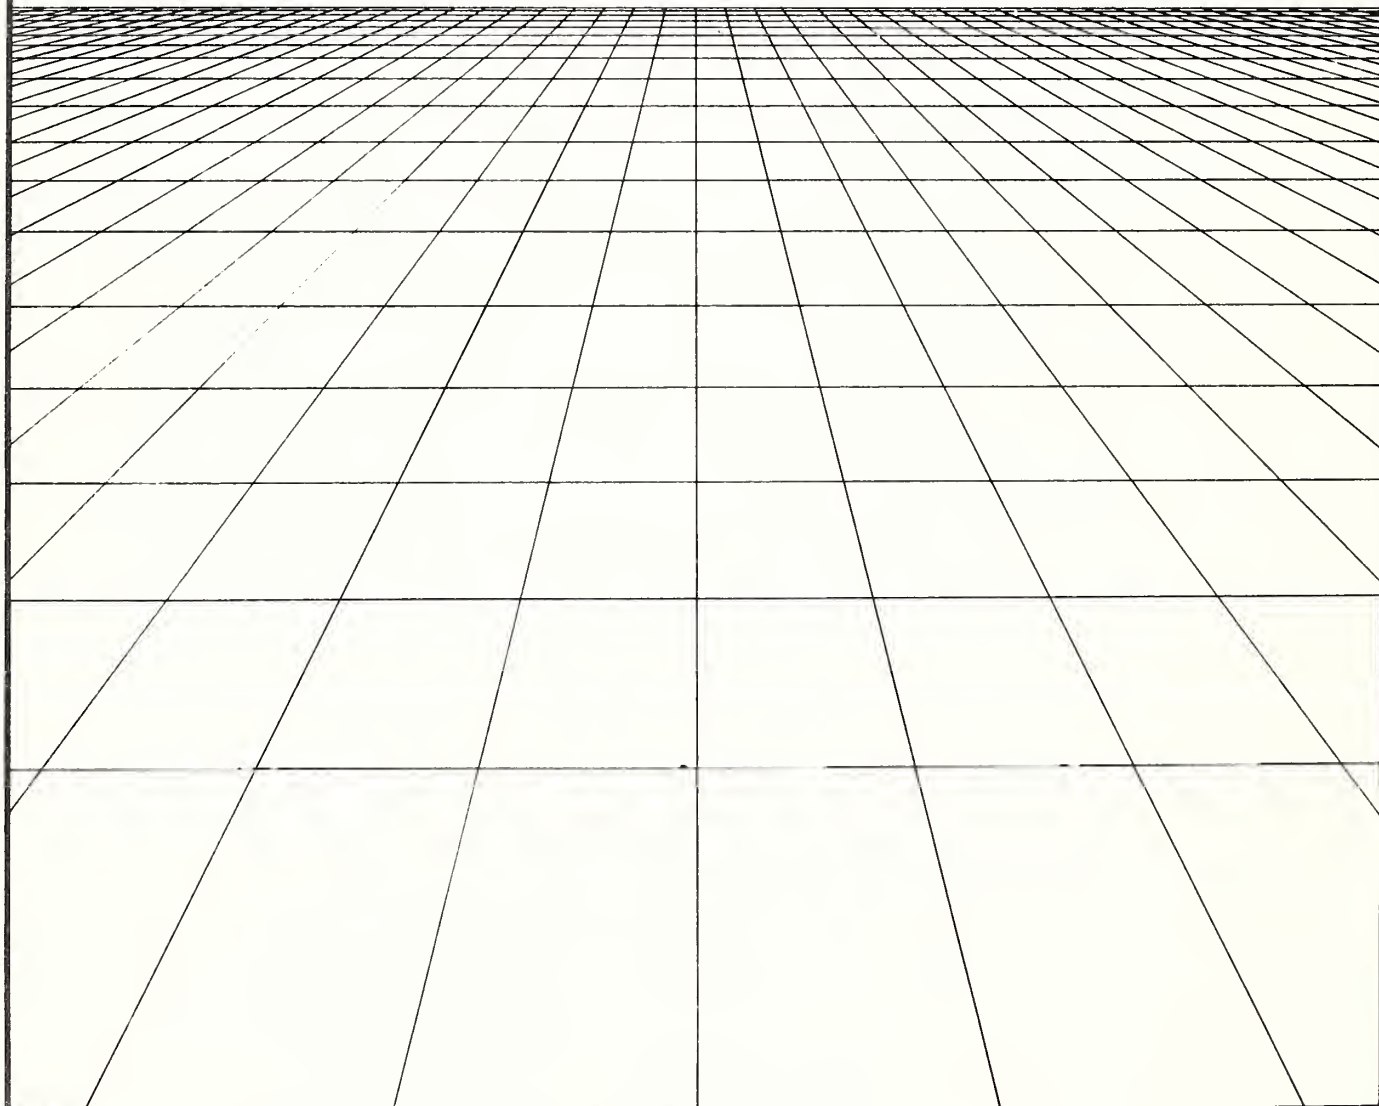

The U.S. share of world trade in HVP's, chiefly processed and semiprocessed food products, stagnated at about 10 percent from 1970-80, while the EC share, with its exports growing by 20 percent per year in that decade, stood at five times the U.S. level.

For more information on the growing market in HVP exports and the not always friendly U.S.-EC competition, be sure to get "High-Value Agricultural Exports: U.S. Opportunities in the 1980's." See box for ordering information.

HOW TO ORDER

For your copy of "High-Value Agricultural Exports: U.S. Opportunities in the 1980's" (GPO no. 001-000-04371-4), send \$4.50 in check or money order to Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Make check or money order payable to Superintendent of Documents. Be sure to include the GPO number in your order. For faster service, call GPO's order desk at (202) 783-3238 and charge your purchase to your VISA, MasterCard, or GPO deposit account. Foreign addresses, add additional 25 percent.

Closing the U.S. Ag Export Gap

USDA Support for Exporters

Keep a step ahead of your competitors by getting the best government forecasts around on commodity-specific export potential through 1990 for selected countries in Africa, Asia, Latin America, and the Mideast.

Export Market Profiles is a series produced jointly by USDA's Economic Research Service and Foreign Agricultural Service. Each title in the series (approximately 20 titles in all) will highlight the production potential of one country's agricultural sector, major trade policies, and export potential for U.S. commodities.

The following titles in the **Export Market Profiles** series are now available; see highlights and ordering information below.

VENEZUELA. 28 pp. \$1.75. GPO no. 001-000-04407-9.

U.S. is largest supplier of farm products . . . U.S. exports to go over \$1 billion by 1990 due to increasing population, rising incomes, and failure of ag sector to keep up with demand . . . Special market development needed.

BRAZIL. 28 pp. \$1.50. GPO no. 001-000-04396-0.

Currently one of top 20 importers of U.S. ag products, but unlikely to remain so . . . Other exporters challenging U.S. . . . Market afflicted by growing debt, stagnant economy . . . Promotional activities could brighten picture for U.S.

HONDURAS. 20 pp. \$1.50. GPO no. 001-000-04397-8.

Imports limited mostly to basic foods . . . Growth expected for imports of wheat, corn, oilseed meal, dried milk, beverage concentrates . . . Imports fueled by increasing population . . . Imports limited by poverty, high debt, sluggish economy, lack of foreign exchange.

CAMEROON. 32 pp. \$2.00. GPO no. 001-019-00349-9.

Farm sector meets 80% of domestic food needs . . . Attractive market for increased U.S. exports due to urbanization and affluence . . . U.S. wheat, rice, fish, and tinned meats show greatest potential for increase . . . Poor transportation may limit marketing beyond major cities.

Also available in the **Export Market Profile** series . . .

TAIWAN. 96 pp. \$4.50 GPO no. 001-000-04345-5.

DOMINICAN REPUBLIC. 36 pp. \$3.50. GPO no. 001-000-04364-1.

To order, write to Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. Make check or money order payable to Superintendent of Documents. Be sure to include the GPO number of the report in your order. For faster service, call GPO's order desk at (202) 783-3238 and charge your purchase to your VISA, MasterCard, or GPO deposit account. Foreign addresses, add 25 percent.

As future titles become available, they will be advertised in **Reports**, a free newsletter published 4-5 times per year. Write to **Reports- EMP**, EMS-INF, Room 1470-S, U.S. Department of Agriculture, Washington, DC 20250.
